

Post-Surgical Physical Rehabilitation

Similar to human orthopedic and neurologic patients, dogs, post-surgery, require physical rehabilitation to recover fully and more quickly.

- Studies have shown that surgery patients who undergo rehab recover faster and achieve a more complete recovery than those who do not.
- In one study, dogs who underwent physical rehabilitation performed better than those who hadn't, even six months after knee surgery.

Why Georgia Veterinary Rehabilitation, Fitness & Pain Management?

GVR offers state-of-the-art facilities, equipment, methods and expertise to provide the best outcome for your dog. Ideally, we would like to see your dog as soon as three days post-surgery.

Dr. Evelyn Orenbuch, CAVCA, CCRT oversees a team of highly trained canine rehabilitation specialists that will tailor a program to fit your dog's needs and your expectations, ranging from at-home exercises, to a 6-week multi-modal rehabilitation and conditioning plan that incorporates:

- Underwater treadmill sessions
- Stretching, balance work, and strengthening
- Massage
- Resistance swimming in Georgia's only canine rehab SwimEx pool

Because pain management is an important part of recovery, GVR offers a variety of pain management tools including cold laser therapy, acupuncture, chiropractic, nutraceuticals, pharmaceuticals, and Chinese herbs.

Relieving Pain • Promoting Fitness • Improving Recovery
